

PATRICK ANTEH

Senior Software Developer & DevOps Engineer | Frappe/ERPNext · Python · Linux · CI/CD

Accra, Ghana (GMT+0)

patrickanteh1@gmail.com · linkedin.com/in/patrick-anteh · github.com/buildwithmoi

SUMMARY

Senior Software Developer & DevOps Engineer with 7+ years' experience, promoted from Intern to Senior at Carbonite Solutions and now leading its development team. Frappe/ERPNext specialist with 30+ client implementations (hotels, restaurants, construction, education); builds business apps in Python, Vue and React and runs the Linux servers that host 20+ client companies. Cut hosting costs by about 60% by moving from AWS to Hetzner and Contabo. Builds quickly with AI coding agents (Claude Code), with every change gated by automated tests, CI and code review.

SKILLS

Languages: Python, JavaScript, TypeScript, SQL, Bash

Frameworks: Frappe Framework (v15/v16), ERPNext, Frappe HRMS, Vue 3, React, frappe-ui, Tailwind CSS

Infrastructure: Linux (Ubuntu) server administration, nginx, Supervisor, systemd, MariaDB/MySQL, Redis, Let's Encrypt SSL, DNS, backup & restore

Cloud & hosting: Amazon Web Services (AWS), Hetzner, Contabo

CI/CD & quality: Git, GitHub, GitHub Actions, pre-commit, Ruff, ESLint, automated testing (Frappe/unittest, Vitest, Playwright)

Integrations: Paystack, Mobile Money, SMS gateways (Hubtel, Arkesel, mNotify), WhatsApp Cloud API, REST APIs

AI-assisted engineering: Claude Code (agent workflows gated by tests, CI and human review)

Currently learning: Docker, Kubernetes, AWS Solutions Architect – Associate (self-study)

WORK EXPERIENCE

Carbonite Solutions Ltd — Accra, Ghana

Jan 2019 – Present

Makers of ERPXpand, a Frappe/ERPNext-based business suite (ERP, HR & payroll, hospitality) for Ghanaian businesses.

Senior Software Developer & DevOps Engineer

Jul 2023 – Present

- Lead the development team day to day: review and merge all code on the company's GitHub organisation, set coding standards, and mentor 3 developers (one since promoted to Senior Developer).
- Cut monthly hosting costs by about 60% (≈US\$400 → ≈US\$150) by moving client systems from AWS to Hetzner and Contabo, matching each client to a provider by traffic and budget; run 4 Linux servers hosting 20+ client companies, managed with a self-built server-management platform (see Projects).
- Main contributor to the company's restaurant POS (~200 commits in 6 months): cashier PIN login, shift management, split bills, a kitchen display with two-way kitchen–waiter requests, offline ordering, kitchen printing routed by department, and room charging through the hotel system.
- Built the POS's GitHub Actions CI/CD pipeline: syntax, build and TypeScript checks on every push, then automated SSH deployment (migrate, build, restart) to multiple production servers.
- Delivered Ghana's 2026 PAYE tax change for HR clients: a bulk tax-table update tool (dry run, background jobs, tests) that keeps each employee's agreed take-home pay, and caught a tax-band error that would have overtaxed everyone earning above GHS 588 a month.
- Cut database queries per page load in the HR mobile app from ~340 to a handful (pages previously took 4–10 seconds), and led the fixes that moved company apps from Frappe v15 to v16.
- Set up client sites and HR/payroll configurations, handle escalations, train client staff remotely and on site, and support pre-sales demos and sales calls; trained 4 sales and presentation staff on the product suite.

Stack: Python, Frappe/ERPNext, Vue 3, React, TypeScript, MariaDB, Redis, nginx, Supervisor, GitHub Actions, Hetzner, Contabo, AWS

Junior Software Developer

Jan 2021 – Jun 2023

- Implemented and configured Frappe/ERPNext for client companies in hospitality (hotels, restaurants), construction, education and other sectors, setting up modules, workflows, roles and reports to fit each client's processes.
- Supported client users day to day: resolved issues, answered queries and trained staff on the system.

Software Development Intern

Jan 2019 – Dec 2020

- Learned Python, JavaScript and the Frappe Framework on the job (self-taught).
- Made sales calls to prospective clients for the company's business software products.

PROJECTS

Ghana PAYE API — *public CI/CD showcase* · github.com/buildwithmoi/ghana-payee-api

- GitHub Actions pipeline: ruff lint → tests on Python 3.12–3.14 → Docker build with a smoke test → publish to GitHub Container Registry → SSH deploy that verifies the live commit and rolls back automatically. FastAPI service for Ghana PAYE/SSNIT (Act 1178), 21 tests.

Server Manager — *Frappe bench and server management platform (own tool, used daily on production servers)*

- Provisions Frappe benches, restores and migrates sites between servers (including v15 → v16), and automates Let's Encrypt SSL, DNS records (GoDaddy and Hostinger APIs) and off-site Google Drive backups, with live job logs in the browser.
- Host intrusion detection: 8 scheduled security checks, SSH/sudo login auditing with GeolIP, a tamper-evident event log, alerts and a daily digest.
- Frappe v16, Python, Vue 3, TypeScript; 2,100+ automated tests; optional AI diagnosis of failed jobs, with every suggested fix approved by a person before it runs.

Salary Muse — *HR & payroll SaaS for Ghanaian employers (own product; launching Oct 2026 with its first 2 customers)*

- Payroll engine for Ghana's rules: PAYE with the 2026 tax bands, SSNIT Tiers 1–3, reliefs and taxable benefits; fills GRA's official return templates and produces SSNIT files plus bank and Mobile Money payment files.
- Multi-tenant SaaS: self-service signup, a separate site per customer, per-employee Paystack billing; payslips by email, WhatsApp and SMS; leave, geofenced attendance, loans, recruitment and appraisals.
- Frappe v16 + Vue 3/TypeScript; ~1,900 automated tests; built with Claude Code under a test-gated, human-reviewed workflow.

Cold Paddy — *Point-of-sale and inventory SaaS for cold stores (own product)*

- Sells by carton, kilo or piece with split payments (cash, Mobile Money, card, credit), expiry-based stock picking, debtor tracking and day-end cash reconciliation.
- Paystack subscription billing with verified webhooks, an operator dashboard (MRR, churn, trial conversion), and tenant isolation tested across customers.
- React 19, TypeScript, Frappe v16; 280+ tests; GitHub Actions with Semgrep and pip-audit security scans.

Freelance client builds

- Afrils: livestock farm-management platform with an animal registry and health records, offline data capture on tablets, a double-entry ledger and KYC (React, TypeScript, Frappe; ~450 tests).
- Bigails Hive: online store with an AI product importer (Claude, OpenAI or DeepSeek), Paystack checkout, affiliate commissions and loyalty points (React, TypeScript, Frappe).

CERTIFICATIONS & TRAINING

- Google Cybersecurity Professional Certificate (Google, via Coursera): in progress, expected Dec 2026
- Frappe Framework Developer course (Frappe School): completed 2022

EDUCATION

Teshie Presbyterian Senior High School, Accra: WASSCE, 2016
